

# User Stories

## Developer

- As a developer, I want to build a secure login and registration system so that users can access their accounts safely and retrieve their personalized data.
- As a developer, I want to integrate geolocation services so that the app can find and display nearby rehab centers based on the user's location.
- As a developer, I want to implement a search and filtering system so that users can find support groups by location, addiction type, and format.
- As a developer, I want to implement filtering capabilities so that users can search for rehab centers and support groups specific to their addiction type.
- As a developer, I want to build a system for daily motivational quotes so that users receive encouragement to stay focused on their recovery.
- As a developer, I want to create a feature for users to log their recovery activities so that they can track treatment centers visited and progress over time.
- As a developer, I want to implement an emergency alert system so that users can quickly access help in critical situations like an overdose.
- As a developer, I want to implement a push notifications system so that users receive updates like daily quotes, reminders for support groups, and emergency alerts.
- As a developer, I want to build a user profile feature so that users can manage their personal information, set preferences, and update their recovery progress.
- As a developer, I want to connect the app to a database so that it can store and retrieve information on rehab centers, support groups, and daily quotes.

## User

- As a user, I want the app to help me quit smoking and/or drinking alcohol.
- As a user, I want the app to allow for family members to be able to be contacted or notified about the progress of the patient.
- As a user, I want the app to give me the ability to save/favorite previously visited/searched for support groups and/or treatment centers.
- As a user, I want the app to give me results tailored to me by incorporating factors such as my location and specific needs into the results.
- As a user, I want the app to give me the contact information and/or address for the support group/treatment center.

## Administrator

- As an administrator I want to control the availability of the app, if for whatever reason it needs to be offline for some period of time, or if it needs to be restricted from certain regions.
- As an administrator I want to see diagnostic reports on the functionality of the app to monitor its operation.
- As an administrator I want to maintain the app and database systems to ensure that it maintains up to date information.
- As an administrator I want to manage user accounts for seeing all permissions maintained and adhered to for the system.
- As an administrator I want to have private user information secured from all levels including the administrator role to see that user privacy is wholly respected.
